Notes: 52350 - (\$20,000) Victim Witness Services

Personnel Justification

Department:

Position: Police Officers (2)

Police

FT/PT Full Time

Total Annual Salary \$147,236

<u>Summary Justification:</u> The City of Mason's current ratio is 1.36 officers to residents per 1,000 residents. Council's Safety Committee expressed a desire to increase the Police Department's staffing levels to a ratio of 1.5 officers to 1,000 residents by 2008.

Additional Information:

The City of Mason's population and area continues to grow. There are two housing developments already planned for 2008 with 429 new homes slated. With the cities growth in 2007, the Police Department will see a ten percent increase in calls for service over 2006. The increase in calls for service strains current staffs ability to invest quality community service time to each complaint.

Population estimates for 2007 put Mason at roughly 30,000 residents. By national standards, to sustain police response levels in a community of 30,000 residents requires 66 officers. This standard is based on 2.2 officers for every 1,000 residents ratio. The City of Mason's current ratio is 1.36 officers to residents per 1,000 residents. Council's Safety Committee expressed a desire to increase the Police Department's staffing levels to a ratio of 1.5 officers to 1,000 residents by 2008. To meet this ratio requires hiring four additional officers.

Like the Fire Department, the Police Department has found the Officer-In-Charge position to be a potential concern in providing quality supervision. The Police Department is proposing, as part of the 2008 budget, a reorganization of command and first line supervision ranks. Reorganization, if approved by Council, will allow the Police Department to provide constant professional supervision levels. Two officers will be needed to backfill the promotions. The ratio of officers to residents does not change, but increased supervision and monitoring of police deployment practices increases substantially because OIC use is reduced. Currently OIC's "supervise" 49.7 percent of shifts.

Equipment Justification

Department: Police

Description: Police Cruisers

Total Cost: \$105,000

Summary Justification:

The City's objective is to begin the budgetary process of "cycling out" a car at approximately 40,000 to 50,000 miles. Given an 18-month lead-time, and estimating 3,000 miles per month, the car will then have approximately 94,000 to 104,000 miles when actually replaced. Four replacement cruisers are being requested as part of the 2008 Budget.

Additional Information:

The ordering of patrol vehicles is based on the state bid schedule. Over the last several years, Ford Motor Company has won the state bid. The City historically orders cars as soon as the state bid is awarded and announced. This usually occurs in late September or early October.

The City's objective is to begin the budgetary process of "cycling out" a car at approximately 30,000 to 40,000 miles. Given an approximate 20-month lead-time, from the time the State awards the bid to deliver of the vehicles, and estimating 3,000 miles per month, the car will then have approximately 94,000 to 104,000 miles when actually replaced. Research has shown that a police car with 100,000 miles on the odometer, has significantly more engine hours that a vehicle driven the same number of miles under normal circumstances. This is due to activities that require the engine to be running while the car is parked (i.e. during traffic stops, crash investigations, etc). These types of activities account for much of what police officers do and are not occasional situations. Ford has recognized the importance of tracking engine hours and is now including an hour meter as standard equipment on the 2006 Crown Victoria Police Interceptor. The police department began tracking engine hours, as well as the mileage, on a monthly basis with the new cruisers placed into service in 2006. Ford estimates that one hour of idle time is equal to 33 miles of driving. Over the course of one year, one cruiser has approximately 1300 hours of idle time for the 35,000 miles that were driven. This is the equivalent of driving an additional 42,900 miles.

Several factors contribute to the City's strategy on police car replacement: Officer safety is the primary concern and the City obviously directs resources to that function. Cars with excessive miles can become a safety hazard for this front-line usage. Maintenance can also escalate when trying to keep a high-mileage cruiser in front-line service.

As previously mentioned, a factor generally overlooked is the car life after the patrol use has ended. Generally, if the car has any life left at all, a department can get four or five years of use after patrol use. Cyled-out patrol vehicles are used as Detective and SRO

vehicles and by other City departments, including Engineering & Building, Public Works, Public Utilities and Parks & Recreation.

In early 2006, a four-wheel drive vehicle, a Ford Expedition was purchased to replace a Crown Vic. The vehicle has served the dual purpose of providing a command type vehicle for the patrol supervisors, as well as a valuable tool during inclement weather. Over the past two years a heavy emphasis has been placed on training for critical incidents. The ability to have a vehicle to act as a temporary or permanent command post for these situations has been very valuable.

A second four-wheel drive vehicle is being requested as part of the 2008 Budget. This vehicle would be a front line patrol vehicle and would likely be assigned to the Officer-In-Charge in the absence of a supervisor. During inclement weather, this vehicle, as is the current four-wheel drive, would be available for patrol use by any on-duty officer.

The following cars with estimated mileage at the time of replacement are included in this 2008 budget request. Note the order date for these cars will be October 2008 with beginning service anticipated in March 2009:

| | | | Estimated miles | Lifetime |
|---------|------|----------------|------------------------|----------|
| | | Current Miles | at time of replacement | Repair |
| Car# | Year | (October 2007) | (March 2009) | Costs |
| Car #4 | 2006 | 45,903 | 96,000 | \$1,633 |
| Car #5 | 2006 | 36,067 | 88,000 | \$1,029 |
| Car #8 | 2006 | 45,021 | 96,000 | \$1,371 |
| Car #10 | 2005 | 41,865 | 95,000 | \$3,831* |

^{*}This vehicle is currently experiencing transmission problems.

Most of the equipment from a cycled-out cruiser can be transferred to the new cruiser. However, there is some additional items needed and changeover costs that amount to approximately \$4,000 per vehicle. Equipment costs for the Ford Expedition will be approximately \$12,000.

Notes:
52340 SCADA is out of warranty we anticipate upgrades or maintence work may be needed on SCADA or other PLCs in the plant 52342 Engineering services for not capital projects. Pretreament, Local limits for industrial discharge to the plant 52460 Strict limits on the new NPDES require additional ferric to meet Total Phosphorous limits 52599 Confined space equipment etc.

Notes:

Equipment Justification

Department: Public Utilities

Description: Lateral Inspection Camera

Total Cost: \$55,000.00

Summary Justification:

Staff anticipates the cost of this equipment can be recouped within a year. Outsourcing a preventative maintenance program of this type for the sewer laterals alone is estimated to cost \$80,000 annually.

Additional Information:

Included in the 2007 Budget was the purchase of a TV Rig Trailer and Equipment for inspecting sewer lines. Over 52,511 lines have been inspected since the purchase of this equipment, in April. Previously the City was outsourcing this work at a cost of \$180 per hour or approximately \$162,000 per year.

The cost associated with outsourcing this service previously prohibited the development of preventive maintenance program for the sewer system. The preventive maintenance program that was developed this year has resulted in the possible elimination of at least five insurance claims due to blockage in a sewer line. Two examples include: Lava Court the Public Utilities Department was helping E&B look for a sewer tap and found a blockage. The vac truck was dispatched and the line was cleaned before it became a problem. Public Utilities was televising Appaloosa Trail and discovered a very large root ball, again the vac truck was dispatched and the problem was taken care of.

In addition, the Engineering and Building Department has used the equipment for videoing the storm water system located in down town and north heights areas. Thus far approximately 5% of the storm water system has been inspected. Staff anticipates that at that rate it will take 5-6 years to complete a review of the entire storm water system.

The equipment is also being utilized as part of the street maintenance program. Before a street is resurfaced the storm water and sewers are inspected with the video system. This inspection helps prevent possible future issues, which may require the street to be once again torn up after being paved. For example staff is currently doing a video inspection of Clover Wood Drive prior to a project that is to start next year.

The purchase of this additional equipment staff can take a proactive approach and resolve issues before they become complaints or public and environmental health issues. The lateral camera will allow the department to inspect individual sewer laterals from the main line to the back of the right of way, ensuring that the lines are in good working order and reducing the possibility of any liability do to a deteriorating infrastructure that may need cleaned, repaired, or replaced. In addition, the City will be able to assist property owners in determining if blockages are a result of a problem in their lateral. In the past 99% of all sewer blockages are the property owners.

at the garage. These spreaders are very heavy, awkward, and sometimes dangerous to load/unload into the PROJECT DESCRIPTION: The Public Works salt spreaders are currently stored outside on the ground trucks which are regularly switched out for brush and leaf pickup. The proposed storage building will be

used to hang the salt spreaders so that our trucks can back under the spreaders to load and unload safely and

GRANT STATUS: N/A

PROJECT DESCRIPTION:

Replacing these lights with updated streetlights results in less manpower demand and is an efficient way to extensive maintenance costs as City staff and contract help struggle to keep these lights in working order. This is the next phase of the street light replacement project started in 2006. Old streetlights require reduce City's cost.
